OBJECTIVE

Recent WGU Software Engineering graduate with practical experience building and deploying client websites, writing code across the full stack, and explaining technical decisions in plain terms. Looking to bring that foundation into a software development role where I can keep building.

EXPERIENCE

Website Developer/Designer | Independent Contractor | Jan 2026–Present

- Built and deployed multi-page client sites from scratch in HTML, CSS, and JavaScript, taking each project from blank file to live URL
- Revised layouts, navigation, and visual details through direct back-and-forth with the business owner, going through multiple rounds until it looked right to them, not just me
- Wrote custom JavaScript components (hamburger menus, shared footer logic, UI interactions) without pulling in a framework, so the codebase stayed easy to maintain
- Set up SEO on every site from day one: XML sitemaps, robots.txt, canonical URLs, and noindex on pages that shouldn't rank. Small things that add up
- Tracked and fixed bugs across browsers and devices as they came up, without breaking anything else in the process
- Kept every project in Git with clean, descriptive commits so changes were easy to trace and roll back was simple if something went wrong

Voluntary QA Contributor | Live Roblox Title (95 Million+ visits) | Feb 2024–Present

- Test new content including items, maps, and features on a high-traffic title as part of a QA team before updates go live
- Run both exploratory and scripted test sessions, logging bugs with enough context that devs can reproduce and fix them without follow-up questions
- Write organized feedback reports that help the dev team sort what needs to be fixed now versus what can wait for the next update
- Collaborate with other testers on balance adjustments and perk ideas, focusing on what makes the game feel fairer and more fun to play
- Bring findings to developers in written summaries and direct calls, keeping feedback specific and the conversation short

EDUCATION

Western Governors University – B.S. Software Engineering, Graduated December of 2025.

- Primary language focus in C# and object-oriented programming, with additional coursework in Python, scripting, and algorithm fundamentals
- Web development coursework covered HTML, CSS, JavaScript, and UI/UX design from layout basics through interactive front-end builds.
- Data coursework ran from SQL foundations through advanced queries and data modeling, with applied statistics and ETL basics alongside.
- Cloud, networking, and systems courses covered AWS fundamentals, network security, and hardware and OS essentials
- Agile methodology, IT leadership, technical communication, and ethics in technology rounded out the degree with the process and professional side of software work

CERTIFICATIONS

AWS Certified Cloud Practitioner – Issued November 2024

CompTIA Project+ – Issued September 2025

ITIL 4 Foundation – Issued December 2025

SKILLS

- **Programming Languages:** C#, Python, JavaScript
- **Web & Front-End:** HTML, CSS, React fundamentals, SEO basics
- **Databases & Data:** SQL (MySQL/SQL Server), data modeling, ETL basics
- **Cloud & DevOps:** AWS Cloud fundamentals, Git & version control, CI/CD pipelines
- **QA & Testing:** Test planning, bug tracking, writing clear defect reports
- **Tools & Frameworks:** Visual Studio, GitHub, SSMS, Claude Code
- **AI & GenAI Technologies:** OpenAI and Claude APIs, prompt engineering, TensorFlow, NumPy
- **Soft Skills:** Client-facing communication, Adaptive prioritization, Structured feedback delivery
